Office Action Summary

Applicant's election with traverse of claim 22 in Paper No. 8 is acknowledged. The traversal is on the ground(s) that claims 22-24 (should have been claims 21-24) represent a single disclosed species. This has been found persuasive because the examiner has not stated that each of claims 21-24 represent a patentably distinct species but that claims 21-24 represent the only claimed patentably distinct species.

Claims 1-20 and 25-27 are generic and have been examined only insofar as the elected species is concerned.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-22 and 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer et al (U.S. Patent No. 4,788,055) in combination with Ozaki et al (U.S. Patent No. 5,411,945).

Fischer et al disclose a sustained release composition containing dextromethorphan and sulphonated polymer ion exchange resin. Ozaki et al disclose a consumable film containing

pullulan. A person having ordinary skill in the art at the time the instant invention was made would have been motivated to combine consumable film of pullulan disclosed by Ozaki et al with a composition disclosed by Fischer et al because such a person would have expected the resulting composition to be useful in the form of a consumable film.
